

PHYSICS OF Flight!

2014-2015
Educational
Series

Our new *Physics of Flight* program introduces our audiences to a wide range of avian, mammal and even cold-blooded creatures that fly—or glide—throughout their habitat. We will explore how nature's design allows these animals to move and how these features have even inspired human flight!

Wildlife exhibits include our new **Harris's Hawk**, a bird of prey from the Southwest U.S., as well as a return encore performance of our popular **Eurasian Eagle Owl**. We also plan to feature our **Green-Amazon Parrot**, and our **Straw-Colored Fruit Bat**, as well as a **Flying Gecko** and a **Southern Flying Squirrel** (native to our own backyard!) later this Fall.

Check our "Program" link online for more info!

**Booking now for Fall/Spring
2014-2015!**

Wildlife programs feature at least 5 live animal exhibits, subject to availability
